SUMMARY

Software Engineer and Computer Science master's student with 3+ years of experience building production backend applications in Java and Spring for the banking domain. Also experienced in full-stack and cloud development with Python, React and AWS, including data pipelines on MongoDB and PostgreSQL and LLM-powered features. Strong foundation in data structures, algorithms and software design, and known for optimizing performance and debugging complex production systems.

PROFESSIONAL EXPERIENCE

Fermi Energy | New York, United States
Software Engineer Intern May 2025 – Aug 2025

- Designed an **AWS** ingestion pipeline **processing ∼550K sensor readings and 20–30 S3 uploads daily**; chose **RabbitMQ (Amazon MQ)** over **Kafka** and built deduplicating **FastAPI** consumers with retries and dead-letter queues
- Designed a schema with raw readings in **MongoDB** and aggregates in **PostgreSQL**, **reduced API latency by 40% with async endpoints**, and shipped via **GitHub Actions CI/CD** gated by **150+ pytest tests (85% coverage)**
- Built a **Next.js** analytics dashboard with **JWT** role-based access, CSV/PDF exports and an **LLM** query feature turning plain-English questions into read-only **SQL**, **reducing leadership's manual reporting effort by 50%**

LTIMindtree | Mumbai, India
Software Engineer Jun 2021 – Jul 2024

- **Reduced cheque data purge runtime from 10 min to 2 s on 5M+ row tables** by replacing a full-table copy-and-reload with config-driven, date-based deletion on an indexed column, eliminating the loss of valid records
- Migrated 5 C banking applications to **Core Java (OpenJDK 11)** and **Spring** as modular services following OOP and SOLID software design principles, validating each with **shell-script** testing against production-like data before release
- Modernized 4 legacy report-generation frameworks by converting standalone **Java** programs into **OpenJDK 17** and **Spring** applications, replacing manual **JAR** deployments and **cutting runtime for 1,000+ reports from 20 to 5 minutes**
- Remediated **Log4j 1.x** security vulnerabilities in 4 production applications through a **Log4j2** migration, and **reduced SonarQube static analysis issues from 150+ to ∼10** by refactoring legacy logic and replacing deprecated APIs
- **Developed 100+ JasperReports** from client requirements using **Oracle SQL**, administered **Linux**, **Unix** and **Windows** reporting servers, and managed UAT-to-production releases and **PostgreSQL** database backup and recovery
- **Increased deployment frequency by 20%** after introducing **GitHub** version control and **Jenkins CI/CD** pipelines with mandatory code reviews, and led daily standups and release coordination with cross-functional teams across the SDLC

PROJECT EXPERIENCE

PayRecon AI | GitHub | Live Demo

- Engineered a three-way payment reconciliation engine matching processor, ledger and bank records with **Java**, **Spring Boot**, **PostgreSQL** and **React**, using integer-cent money handling and **Flyway**-versioned schemas
- Built a synthetic transaction generator with a seeded-breaks answer key to validate match accuracy, and integrated the **Anthropic API** via **Spring AI** for batched, plain-English break explanations in an interactive visitor sandbox

BrainyBinder | GitHub

- Engineered a **RAG** knowledge assistant **over 50 PDFs** using **FastAPI**, **ChromaDB**, **Gemini API** and **Next.js**, applying sentence-aware chunking, **Sentence Transformer** embeddings and similarity filtering for page-level cited answers
- **Reduced worst-case response latency from 2–3 minutes to seconds** through bounded timeouts, controlled retries and model fallback, and implemented cached full-document summarization that covers every section of an uploaded PDF

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript
Software and OS: Linux, Unix, Git, GitHub, Jenkins, Docker, Kubernetes, CI/CD pipelines
Web Technologies/Frameworks: Spring, REST APIs, JUnit, Maven, Node.js, Next.js (React)
Database: MongoDB, PostgreSQL, MySQL, Oracle SQL Developer
Cloud Platforms: AWS, Google Cloud Platform
AI & Data Platform: Vector Databases (Chroma/Qdrant), Retrieval-Augmented Generation (RAG), Kafka Streams

EDUCATION

Binghamton University, State University of New York, Thomas J. Watson College of Engineering and Applied Science
Master of Science in Computer Science Expected Dec 2026
Relevant Coursework: Design & Analysis Comp Algorithm, Database Management, Design Patterns

Mumbai University, Mumbai, Maharashtra Jun 2021
Bachelor of Science in Electronics and Telecommunication Cumulative GPA: 3.59/4.00
